Publication of this draft standard for trial use and comment has been approved by Health Level Seven International (HL7). This draft standard is not an accredited American National Standard. The comment period for use of this draft standard shall end 24 months from the date of publication. Suggestions for revision should be submitted at http://www.hl7.org/dstucomments/index.cfm.

Following this 24 month evaluation period, this draft standard, revised as necessary, will be submitted to a normative ballot in preparation for approval by ANSI as an American National Standard. Implementations of this draft standard shall be viable throughout the normative ballot process and for up to six months after publication of the relevant normative standard.

Structure of This Guide

The HL7 CDA® Release 2 Implementation Guide is a C-CDA Product Line Companion or Supplemental IG. It provides narrative introductory and background material pertinent to this IG, including information on how to understand and use the templates in Part I. In Part II, it contains the normative Clinical Document Architecture (CDA) templates for this guide along with lists of all templates, code systems, value sets, and changes from the previous version.
Quality Requirements of This Guide

The approved Structured Documents quality criteria at the time of publication are enumerated below. The list of quality criteria, and this companion guide template, is always evolving with the latest items on the wiki: [http://wiki.hl7.org/index.php?title=CDA_Implementation_Guide_Quality_Criteria](http://wiki.hl7.org/index.php?title=CDA_Implementation_Guide_Quality_Criteria)

- When replacing a template, new template must be backwards compatible. Template must assert 'conforms to' relationship. A sample must include an example that validates against new and prior version.
  - **Title Page**
    - Title is Specified
    - Version of base standard is specified (e.g. CDA R2)
    - Realm(s) is/are specified
    - Ballot type (e.g. DSTU, Informative, etc) is specified
    - Date of ballot / publication is specified
    - HL7 International logo and copyright are present
    - HL7-approved title page is used and not changed (i.e. title page is approved by HQ)
      - The correct title page may change depending upon whether the document in question is up for ballot, being published as a DSTU, being published as an Informative document, or being published as a ANS
      - The Title page SHALL contain the correct HL7 ballot or publication identified (assigned by HL7 HQ, and, for ballot items, available in the ballot announcement)
      - The Title page SHALL contain the correct and appropriate HL7 copyright information and IP Compliance statement (noting that on final publications, the IP Compliance statement is placed by itself on page 2
      - For Technical Reports, the title page shall contain the following text: "A Technical Report prepared by Health Level Seven International and registered with ANSI: [technical report ANSI registration date]"
      - When appropriate, the title page or introductory material will contain the appropriate front matter recognizing LOINC.
  - **Templates**
    - Each template has a narrative description
    - Each template has a globally unique identifier
    - Constraints are ordered within a template per the XML ITS ordering rules
Constraint conformance numbers should be present during ballot, but must be present for final publication. Each conformance number must be unique within the guide.

- **Value sets**
  - Are linked to coded elements within templates using normative binding syntax
  - Each value set is referenced via a value set OID
  - Each code in a value set has a specified code system OID

- **Examples**
  - At least one stand alone and conformant sample file is present
  - Inline examples are present for all new (subject to ballot) templates (which can contain ellipses)

- **Extensions**
  - A table summarizes all extensions
  - Modified Schema including all extensions

- **Components of the final publication package**
  - Implementation Guide
  - At least one conformant sample instance
  - Extension schema (where applicable)

- Adherence to CDA IG Publishing subgroup decisions as they are created and documented on the wiki

- Structured Documents C-CDA Quality criteria continue to evolve and should be reviewed prior to ballot.

Part I. Introductory, Background and Supportive Material
This complements the material in C-CDA Volume 1.

1 INTRODUCTION
• Additional guidance for C-CDA Volume 1
• Guidance shouldn’t repeat content from C-CDA Volume 1 but may supplement by referencing specific Volume 1 Chapters.
• Explain how these updated or new templates supplement C-CDA

1.1 Purpose
• Why did you create these updated or new templates?
• What problem or need will these updated or new templates help solve?

1.2 Audience (Intended Users)
Standard C-CDA Language:
The audience for this implementation guide includes architects and developers of healthcare information technology (HIT) systems in the US Realm that exchange patient clinical data. Business analysts and policy managers can also benefit from a basic understanding of the use of CDA templates across multiple implementation use cases.

1.3 Prerequisite Information (new)

### 1.6 Design Considerations

Describe how new templates compliment, conform to, or replace existing C-CDA templates.

When replacing a template, new template must be backwards compatible. Template must assert ‘conforms to’ relationship. A sample must include an example that validates against new and prior version.

Replacement or optional use of new templates should only be done after consulting with the implementation community.

### 1.7 Backwards Compatibility Considerations

Backwards compatibility means [definition of what backwards compatibility means/requires.]

#### 1.7.1 Visual Overview

The following illustrations show the template versions defined in this Guide and their relationships to prior versions.

*Figure 1: Overview of Backwards Compatibility for Defined Template Revisions*

[Insert diagram here.]
1.7.2 Description of Backwards Compatibility for Template New Version
[Explain backward compatibility on a constraint by constraint basis.]

Side-by-side constraint comparisons are as follows:

<table>
<thead>
<tr>
<th>Pervious Template Name (Vn-1)</th>

</table>
Table 14: Healthcare Provider Taxonomy (HIPAA)

The Health Care Provider Taxonomy value set is a collection of unique alphanumeric codes, ten characters in length. The code set is structured into three distinct Levels including Provider Type, Classification, and Area of Specialization. The Health Care Provider Taxonomy code set allows a single provider (individual, group, or institution) to identify their specialty category. Providers may have one or more than one value associated to them. When determining what value or values to associate with a provider, the user needs to review the requirements of the trading partner with which the value(s) are being used.

Value Set Source: https://phinvads.cdc.gov/vads/ViewValueSet.action?oid=2.16.840.1.114222.4.11.1066

</table>
This value set identifies the healthcare agent or proxy roles that individuals commonly designate to empower surrogates to make medical treatment and care decisions when the individual is unable to effectively communicate with medical personnel or requires assistance with decision making.

The intent of this value set is to identify the questions used to determine an individual's choices for a healthcare agent or proxy, including the designation of surrogates.

The value set is defined by this list of concepts.
